

KI-gestützte Generierung dynamischer Webseiteninhalte

Bachelorarbeit Informatik

Agenda

- 1. Motivation
- 2. Problem
- 3. Methodik
- 4. Umsetzung
- 5. Fazit

Motivation

Energiemonitor

Problem

Problem

- Unterschiedliche Anforderungen der Benutzer
- Komplexität des Zugangs zu digitalen Inhalten
- Mangel an flexiblen und personalisierbaren Benutzeroberflächen

Methodik

Generierung von UI5-Code

Generierung von HTML-Code

Modifikation bestehender UI-Elemente

Auswahl vordefinierter Fragments und APIs

Dynamische Generierung der UI basierend auf API-Antworten

Technologien

Architektur

Datenfluss

Modelle

1_1

```
{"companyName": "TechCorp", "location": "NewYork", "isHiring": true, "departments": ["Engineering", "HR", "Sales", "Marketing"], "employees": [{"employeeId": 1001, "name": "AliceJohnson", "external": "true", "salary": 85000, "contactInfo": {"email": "alice.johnson@techcorp.com", "phone": "123-456-7890"}}, {"employeeId": 1002, "name": "BobSmith", "external": "false", "salary": 75000, "contactInfo": {"email": "bob.smith@techcorp.com", "phone": "987-654-3210"}}, {"employeeId": 1003, "name": "CarolWhite", "external": "false", "salary": 68000, "contactInfo": {"email": "carol.white@techcorp.com", "phone": "555-123-4567"}}], "__metadata": "someirrelevantdata", "companyId": "12345"}
```

1_2

```
13
         "employees":[
14
               "employeeId":1001,
15
               "name": "AliceJohnson",
16
               "external":"true",
17
18
               "salary":85000,
               "contactInfo":{
19
                  "email":"alice.johnson@techcorp.com",
20
                  "phone": "123-456-7890"
21
22
23
```

employees				
employeeId	name	external	salary	contactInfo
1001	Alice Johnson	true	85000	[object]
1002	Bob Smith	false	75000	[object]
1003	Carol White	false	68000	[object]

employees				
employeeId	name	external	salary	contactInfo
1001	Alice Johnson	true	85000	>
1002	Bob Smith	false	75000	>
1003	Carol White	false	68000	>

getCompany / employees / 0 / contactInfo /		
getCompany		
email	alice.johnson@techcorp.com	
phone	123-456-7890	

Umsetzung

Backend

- SAP Backend
- NGINX Backend
- SQLite Datenbank
- Kommuniziert mit OLLAMA (oder anderen APIs)
- Speichert User und deren Verlauf

Frontend

MVC

- ...

Code Snippets

function calling

```
const fn = await this._getFn(prompt);
const data = await this[fn.name](fn.parameters);
const path = await this._getPath(data, prompt);
```

Code Snippets

CustomNavJSON

```
<custom:CustomNavJSON
         id="idCustomNavJSON"
         title="{currentData>/title}"
         params="{currentData>/params}"
         data="{currentData>/data}"
         path="{currentData>/path}"
         <custom:noData>
 8
 9
             <core:Fragment
                 fragmentName="energiemonitor.fragment.NoData"
10
11
                 type="XML"
12
         </custom:noData>
13
     </custom:CustomNavJSON>
14
```

Code Snippets

chart

```
16
17
     this._createChartConfig(chartResp, extractedData);
18
     this._setOptions(chartResp);
19
20
     this.destroyChart();
21
22
     this._chart = new Chart(
23
         document.getElementById("chartCanvas").getContext("2d"),
24
25
         this._chartConfig
26 );
```

Fazit

Fazit

- Integration von LLMs in Webanwendungen bietet erheblichen Mehrwert
- Nur das nötigste von LLMs generieren lassen, so wenig wie möglich
- LLMs machen Fehler
- Fehler müssen mit Programmierlogik erkannt und behoben werden
- Leistung der LLMs hängt von eingesetzter Hardware ab

Optimierungsmöglichkeiten

- JSON Responses anpassen Design kann im Backend festgelegt werden
- Vorschaufunktion bei verschachtelten Objekten
- Keys der JSON Responses als Keys für i18n-Texte verwenden
- Möglichkeit UI-Elemente auf Startseite zu fixieren
- Dem User die Möglichkeit geben eigene LLMs einzubinden (Datenschutz)
- KI-APIs vor Missbrauch schützen (Rate Limiting)

Ausblick

- Tabellen und Listen um zusätzlich KI-Features erweitern
- Konzept für POST-, UPDATE- und DELETE-Operationen
- Fine-Tuning & Prompt-Tuning
- Parallele Anfragen
